Mr John Robinson  
Salem Mass.

My Dear Sir - The specimens of Button woods from you have been examined this morning and I find that there is an abundance of the Anthracnose (Gleosporium nervisquam) upon the older leaves. There is no doubt but that the trouble is the same as noted in Garden and Lomb. I am very glad to hear from you and shall at all times be pleased to answer any questions that seem to you in my line -

Yours very sincerely  
Byron D. Halsted
